

*Bespoke netting solutions for safety, containment or special effect.*

## NETTING

Our safety and industrial netting systems are unlimited by size or shape and can be used to capture or contain in any number of ways.

There may be no other material that meets the requirements of safety and flexibility in such a cost effective and variable way as custom made nets, supplied and fitted by our experienced installers to suit any application.

## SAFETY NETTING

### PERSONNEL AND MATERIALS CATCHING SAFETY NETS

Collective Safety Netting and Overhead Protection Solutions to protect all workers above and below.

Certified fall arrest netting (BS-EN 1263) with or without a materials catching overlay, provides a complete 'soft catch' alternative or supplement to traditional fall arrest systems and PPE.

Installed beneath the work area, safety nets allow workers full freedom of movement and thought enabling them to focus on the job in hand.

Combined with a materials catching overlay, safety netting also allows activities to continue unhindered beneath.

Benefits of safety netting by Kerrect experienced installers:

- Collective catch system – not dependant on the use of PPE by the workers.

- Soft catch – High energy absorption of the net translates to minimum impact on a fallen person, thus reducing the risk of lost time injuries.
- Freedom of movement and thought – unlike harnesses and PPE, there is no restriction of movement from the system or device, unhampered personnel can fully focus on their job.
- Complete protection – Combined with a materials catching overlay, safety nets provide protection below from falling tools, materials and even building or structural elements.
- Ease of rescue – Easy rescue procedures and, more importantly, no risk of harness suspension trauma. This allows the rescue to be carried out safely, without the added pressure of time constraints and without putting the rescuer in a high risk environment. Often the fallen person can simply climb back out of the net.

## CONTAINMENT AND ENCAPSULATION NETTING

Encapsulation of work areas or loose elements of buildings and structures, providing an immediate containment solution for the short or long term. Solutions are available in a wide choice of colours and mesh sizes to suit individual applications.

## SAFETY NET FANS

Installed and certified, Safety Net Fans provide additional measures of overhead protection to exposed building perimeters during the construction process or as a temporary safety measure where loose elements of facades or structures have been identified. Raised as construction height increases, the safety net fan provides an immediate catch at the working level protecting a much wider projected area below.

## TENSION NETTING PLATFORMS

Provides a safe, quick and easy work platform to access the soffits and underside of structures such as bridges, jetties, and atriums, spanning beneath areas inaccessible from below. Suitable for all manner of inspection, maintenance, remedial and refurbishments work.

## WHEN TO USE SAFETY NETTING

- Roofing replacement and repair
- Composite panel roofing
- Bridge construction and repair
- Steel frame construction
- Formwork leading edge protection
- General fall protection
- Building perimeter fans
- Construction containment
- Loose materials and building fabric containment
- Shafts and openings
- Helipads

## INDUSTRIAL NETTING

### PALLET RACK SAFETY NETTING

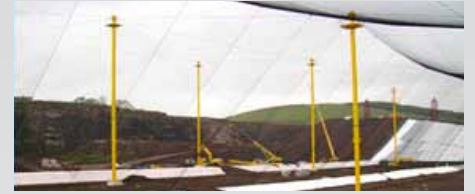

Protects people from falling goods in high warehousing, whilst protecting goods from damage if falling from shelves and racks, resulting in significant cost savings in damaged stock.

## ANTI LITTER NETTING

Prevents pollution to surrounding areas from landfill and refuse sites or quarries. Contains the spread of smaller items such as paper, foils and solid foam products.

Protects the environment from pollution. Saves the site manager from the costs of clearing escaped waste or debris outside the designated area.

## BIRD/PEST CONTROL NETTING

Prevents the unwanted entry of birds or other pests, thereby providing protection from disruption, damage, general soiling or other such nuisance. Pest control helps maintain the appearance and longevity of buildings and structures. Available in a choice of colours and mesh sizes to suit the particular location.

## VISUAL EFFECT LIGHT NETTING

Interwoven with polymeric optical fibres, Light Netting can be stretched into almost any size or shape to create individual designs providing a unique opportunity to capture light or set an architectural tone. Ideal for events, displays and seasonal decoration.

**SAFETY** VALUE ENGINEERED SOLUTIONS TO PROTECT YOUR WORKERS AT HEIGHT.

**ACCESS** COST SAVING STRUCTURAL & BUILDING MAINTENANCE IN COMPLEX ACCESS SITUATIONS.

**PRODUCTS** UNIQUE RANGE OF HEIGHT SAFETY, EDGE PROTECTION AND ACCESS EQUIPMENT.
